Subject	Selection Post Higher Secondary level

Section: General Intelligence

Q.1 दिए गए विकल्पों में से उस संख्या का चयन करें जो निम्नलिखित श्रृंखला में प्रश्न चिह्न (?) के स्थान पर आ सकती है।

729, 512, 343, ?, 125

Ans X 1. 16

2. 216

X 3.64

X 4.576

Question ID : 630680411942 Option 1 ID : 6306801606604 Option 2 ID : 6306801606606 Option 3 ID : 6306801606605

Option 4 ID : **6306801606603** Status : **Answered**

Chosen Option : 2

Q.2 दो कथनों के बाद I, II और III से अंकित तीन निष्कर्ष दिए गए हैं। कथनों को सत्य मानते हुए, भले ही वे सामान्यतः ज्ञात तथ्यों से भिन्न प्रतीत होते हों, निर्णय लें कि कौन-सा/कौन-से निष्कर्ष कथनों का तार्किक रूप से अनुसरण करता है/करते हैं।

कथन:

कुछ मग रग हैं। सभी टग मग हैं।

निष्कर्ष:

कुछ रग मग हैं।

॥. कुछ मग टग हैं।

III. कोई रग मग नहीं है।

Ans \chi 1.। और III दोनों निष्कर्ष अनुसरण करते हैं।

🗶 २. ॥ और ॥। दोनों निष्कर्ष अनुसरण करते हैं।

🥒 ३. । और ॥ दोनों निष्कर्ष अनुसरण करते हैं।

🗶 ४. सभी निष्कर्ष ।, ॥ और ॥। अनुसरण करते हैं।

Comprehension: In the following passage, some words have been deleted. Read the passage carefully and select the most appropriate option to fill in each blank. The water cycle, also known as the hydrological cycle, is a continuous process that circulates water throughout the Earth's systems. It involves the movement of water between the , the water bodies and the land. The cycle consists of several key stages, each playing a crucial role in maintaining Earth's water balance. At the heart of the water cycle is the process of (2)_ . This is where water from oceans, lakes and rivers is heated by the sun and turns into water vapour. This water vapour then rises into the atmosphere, where it cools and condenses to form clouds. When these clouds become heavy enough, they release their moisture through (3)_ can fall as rain or other forms of precipitation. When precipitation falls onto the land, it can take different paths. Some of it may evaporate back into the air, while some may be taken up by plants and released back into the atmosphere through a process called (4)_____. The rest of the water may flow over the land's surface, gathering in streams and rivers that eventually lead back to the oceans, completing the cycle. The water cycle is essential for maintaining Earth's ecosystems and supporting life. It helps distribute fresh water to various regions, replenishes water sources, and plays a role in temperatures. Understanding the water cycle is crucial for addressing regulating (5) water scarcity and managing natural resources effectively. Read the given passage and answer the questions that follow.

Our failure to control one of the most common of all ailments sometimes seems ridiculous. Medical science regularly practises transplant surgery and has rid whole countries of such killing diseases as Typhus and the Plague. But the problem of the common cold is unusually difficult and much has yet to be done to solve it. It is known that a cold is caused by one of a number of viral infections that affect the lining of the nose and other passages leading to the lungs, but the confusing variety of viruses makes studying and remedy very difficult. It was shown in 1960 that many typical colds in adults are caused by one or the other of a family of viruses known as rhinoviruses, yet there still remain many colds for which no virus has as yet been isolated.

There is also the difficulty that, because they are so much smaller than the bacteria which cause many other infections, viruses cannot be seen with ordinary microscopes. Nor can they be cultivated easily in the bacteriologist's laboratory, since they only grow within the living cells of animals or plants. An important recent step forward, however, is the development of the technique of tissue culture, in which bits of animal tissue are enabled to go on living and to multiply independently of the body. This has greatly aided virus research and has led to the discovery of a large number of viruses. Their existence had previously been not only unknown but even unsuspected. The fact that we can catch a cold repeatedly creates another difficulty. Usually, a virus strikes only once and leaves the victim immune to further attacks. Still, we do not gain immunity from colds. It seems, therefore, that we are likely to have to suffer colds for some time yet.

SubQuestion No: 21

Q.21 Which of the following is the most appropriate summary of the given passage?

Ans 1. Virus research has led to the discovery of a large number of viruses and leaves the victim immune to further attacks.

2. In spite of having the cure to kill diseases like Typhus and Plague, it seems ridiculous that medical science has not done much yet to solve the problem of the common cold.

X 3. Usually, a bacteria strikes only once and we do not gain immunity from colds

X 4. The problem of common cold is unusually difficult, hence, we are likely to get relief from cold.
